

Animal science

Animal science researchers strive to enhance livestock and animal production by improving efficiency, welfare and sustainability.

They tackle issues like mitigating methane emissions, optimising nutrition, lessening climate change impacts and advancing assisted reproductive technologies.

Our production and equine science team develops innovative solutions in sustainable livestock systems, anatomy, physiology, endocrinology, in vitro embryo production, genetic preservation, breeding, genetics and individual animal management.

We partner with primary producers, industry, NGOs, government and other academic institutions to deliver nutritious, affordable animal-based food, promote animal welfare and sustain production industries.

Researchers

Associate Professor Elham Assadi Soumeh

Dr Anne Beasley

Dr Andres Gambini

Dr Suresh Krishnasamy

Associate Professor Sarah Meale

Dr April Reside

Dr Zannie Langford

Professor Andrew Barnes

Dr Angela Lees

Dr Danielle Fitzgerald

Dr Nick Hudson
